

Hackathon Project Phases Template

Project Title:

SmartResume Generator: Customized Resumes for Every Opportunity

Team Name:

NextGen Resume

Team Members:

- Shaik Abdulla Afzal Khadri
 - Panidapu Sri Charan
 - Konduru Bhargava Sai
 - Keerthi Veera Vasanth Narayana
 - Parchuri Sri Ganesh
-

Phase 1: Brainstorming & Ideation

Objective:

Develop an AI-driven resume generator that automates the creation of professional resumes, streamlining the job application process.

Key Points:

1. Problem Statement:

The Resume Generator project aims to automate the creation of tailored, professional resumes by analyzing user inputs such as personal details, job experience, and career aspirations.

2. Proposed Solution:

- AI-driven resume generation based on user inputs
- Tailored content optimization for specific industries
- Integration of best resume-building practices
- Fast, structured, and visually appealing resume output

3. Target Users:

- Students and fresh graduates
- Job seekers transitioning between careers
- Professionals seeking to enhance their resumes

4. Expected Outcome:

- User-friendly tool generating high-quality, personalized resumes
 - Reduced time and effort in resume-building
 - Improved chances of job placement
-

Phase 2: Requirement Analysis

Objective:

Define technical and functional requirements for the project.

Key Points:

1. Technical Requirements:

- **Programming Languages:** JavaScript
- **Frameworks:** React.js, Angular, Vue.js

2. Functional Requirements:

- User authentication and profile creation
- Input fields for education, experience, and skills
- AI-generated resume templates and recommendations
- Downloadable PDF and Word resume formats

3. Constraints & Challenges:

- Ensuring AI-generated resumes align with professional industry standards
 - Maintaining scalability for multiple user requests
 - Keeping resume outputs concise yet impactful
-

Phase 3: Project Design

Objective:

Create the system architecture and user flow for the project.

Key Points:

1. System Architecture Diagram:

(Simple flowchart showing user input, AI processing, and output)

2. User Flow:

- User signs up/logs in
- Inputs career details and preferences
- AI processes data and generates a resume
- User downloads the final resume in preferred format

3. UI/UX Considerations:

- Minimalistic, clean, and professional design
- Interactive fields for real-time previews
- Responsive design for mobile and desktop users

Phase 4: Project Planning (Agile Methodologies)

Objective:

Break down tasks using Agile methodologies to ensure timely project completion.

Key Points:

1. Sprint Planning:

- **Sprint 1:** Backend setup & database design
- **Sprint 2:** AI model integration & resume formatting
- **Sprint 3:** Frontend development & user interactions
- **Sprint 4:** Testing, debugging, and deployment

2. Task Allocation:

- **AI/ML Model:** (Assigned Member)
- **Backend Development:** (Assigned Member)
- **Frontend & UI/UX:** (Assigned Member)
- **Integration & Deployment:** (Assigned Member)

3. Timeline & Milestones:

- **Week 1:** Initial setup and model selection
- **Week 2:** Backend API and database integration

- **Week 3:** Frontend UI design and feature implementation
 - **Week 4:** Final testing, debugging, and deployment
-

Phase 5: Project Development

Objective:

Develop the project and integrate all components.

Key Points:

1. Technology Stack Used:

- **Frontend:** React.js, Tailwind CSS
- **Backend:** Node.js, Express.js
- **Database:** MongoDB
- **AI Model:** Generative AI for resume content generation

2. Development Process:

- Implement user authentication
- Design input forms for user data
- Connect AI model to generate resume content
- Develop front-end UI for resume selection
- Enable download and sharing functionality

3. Challenges & Fixes:

- **AI-generated content quality:** Fine-tune prompts for industry-specific resumes
 - **User data security:** Encrypt user inputs and store data securely
 - **Formatting Issues:** Implement structured templates using dynamic layout engines
-

Phase 6: Functional & Performance Testing

Objective:

Ensure the project works as expected through rigorous testing.

Key Points:

1. Test Cases Executed:

- AI-generated resume accuracy test
- Resume formatting verification
- Performance and scalability tests
- User input validation and security checks

2. Bug Fixes & Improvements:

- Enhanced AI output to be more relevant to job descriptions
- Fixed UI layout inconsistencies
- Optimized resume PDF export functionality

Final Validation:

- Does the resume meet user expectations? 
- Are industry standards followed? 
- Is the tool responsive and user-friendly? 

Deployment (if applicable):

1. Deployment steps and links to the live project.

Final Submission:

1. Project Report
2. Demo Video (3-5 minutes)
3. GitHub/Code Repository Link
4. Presentation
